

# TNT HI-ENERGY HAY

## What is *TNT Hi-Energy Hay*?

*TNT Hi-Energy Hay* is a combination of natural products specially selected and blended to support and promote the growth and production of forages and pastures, but is suitable for use on other crops as well. The *TNT Hi-Energy Fish* in *TNT Hi-Energy Hay* works to enhance the benefits of the other ingredients, improving the micro-bial and plant response to increase crop quality and yield.

**Why use *TNT Hi-Energy Hay*?** *TNT Hi-Energy Hay* can increase root mass, improving water and nutrient availability. The injection of volatile fatty acids, amino acids and minerals into the crop means the plant has the building blocks it needs to ensure higher nutrient density and energy content. The improvement in nutritional and energy status of the plant increases forage quality and allows the plant to better interact with the beneficial soil organisms, improving its natural immunity and resistance to drought, disease and insect pressures. Quality can be shown by visual improvement of the plants and livestock preference of the treated crop; yield by more bales put up in the barn. **Is *TNT Hi-Energy Hay* for organic or conventional production?** Growers in organic or conventional management systems can benefit from *TNT Hi-Energy Hay*. Check with your certifier before using any product in organic production.

**When should I use *TNT Hi-Energy Hay*?** *TNT Hi-Energy Hay* is best applied after each cut or grazing but can be used on any crop at any time, from planting and throughout the growing season. *TNT Hi-Energy Hay* can be applied to non-forage crops as often as every 2 weeks at the lower application rate. **How should I use *TNT Hi-Energy Hay*?** *TNT Hi-Energy Hay* is intended to be used as a foliar, after each cut or grazing, or throughout the growing season on other crops. It can also be soil applied. Adequate dilution is important. See the label for more details.

### Application rates

*Foliar/soil:* 2-8 qt (2-8 L)/acre; 1:10+ dilution

*Fertigation:* 1:5000 dilution every watering

*TNT Hi-Energy Hay* is not intended to be the sole input and should be part of a systems approach. Always do a jar test for compatibility when mixing this product with any other inputs.
